

Chart Forms on Demand

Eliminate Blue Cards

Patient, Jane T.
 ENC:2798653342 I 12E 1207 2
 09/13/1968 34Y F LUT
 MR#:32567456 ADM DATE: 08/29/200:
 HOSP PT SVC: PRE REG

Benefits:

- Preprinted forms are eliminated
- Imprinters are eliminated
- Plastic cards are eliminated
- Affixing labels unnecessary
- Time to order, stock, find forms eliminated
- Obsolete forms eliminated
- Data fields imprinted are user defined
- Bar codes are enabled

FormImprint is an On Demand printing program which allows nurses to print chart forms with imprint data on BLANK PAPER using a laser printer. Chart forms typically include nurses notes, progress notes, MARs, Physicians orders, consent forms, nursing databases, daily sheets and many others. This process eliminates preprinted forms, imprinters, blue plastic cards, embossers and labels. Imprint data can be rendered as bar codes so that chart forms can be scanned and indexed automatically into the electronic medical record.

How does it work?

Your hospital's chart forms are digitized by FormFast graphical design software either by your personnel or by FormFast professional services and stored in a directory on the host system. The FormImprint program is accessible through any work station via web, Citrix or locally for down time purposes. It provides a menu which allows the nurse to select a user defined imprint and print it onto blank paper stock. The nurse can merge imprints for any patient or user-defined group of patients with any form or user defined group of forms (packet). For example, imprint data for a new patient could be merged with a packet called StartChart to print a completely new patient chart. Or, imprint data for all patients on the floor could be merged with a packet of all Daily Sheets to refresh documents at a shift change. Per the sample imprint on this form, imprint data can include data not normally shown, such as Height and Weight, and can be displayed in barcode representation if desired. There is a free text capability, which allows nursing to create templates for standing orders, teaching forms or any other purpose. FormImprint will also print wristbands or sheets of imprinted labels, with or without barcodes, if desired. FormImprint can be linked to your HIS system via HL7 or ODBC link when available or by use of FormFast Print Manager. The application is HIPAA and CCOW compliant.
