

## Patient Access Automation

Four Easy Steps to Enhanced Patient Safety & Satisfaction

**FormFast provides simple, affordable safeguards for your patients.**

With FormFast, you can reduce medical errors, increase patient satisfaction with the access process, complete the EMR and add bar codes to documents throughout the hospital.

### 1. Select a patient through the seamless FormFast ADT interface

Enter data to the FormFast system either through an automated ID card interface or through direct interface to host as available. This offers a quick and secure solution for patient access personnel.

### 2. Generate Bar Coded Wrist Bands, Labels and Forms On Demand

Eliminate patient and specimen identification errors. Produce bar coded wristbands *with new Patient Photo Option* to support point of care verification of patient ID for medications, phlebotomy, transfusion, glucometers, supply management and treatments. Bar coded labels replace imprinters and facilitate automated document scanning to electronic medical records. Face sheets, ABNs, consents generated On Demand.

### 3. Scan Insurance Cards to Image Database

Improve cash flow and increase reimbursement. Scan patient insurance cards and license or consent to an image database. Provide immediate insurance information to patient access and patient accounting personnel.

### 4. Capture Signed Consent Online Using Signature Pad

View all consents electronically. The EMR now includes a legal image of signed consent forms for Medical Release of Information, treatment, communication of Patient Rights, and operative consent. Patients sign a signature pad, view the document online and receive a printed copy of the consent on demand.
