

PreRegistration and Registration Documents Automated on the Web and On Demand

Benefits:

- Collect and Enter PreRegistration Data on the Web
- Enable hospital wide bar code applications
- Eliminate expensive preprinted forms
- Automate blue cards, imprinters, embossers and associated legibility errors
- Increase Patient Satisfaction with access process
- Automatically generate correct insurance forms, consents, patient ID, labels

Eliminate Duplicate Key Entry of PreAdmission Data

FormFast starts the process on our web based FormFastSite where prospective patients or physician assistants can fill out Preregistration forms on line on the web.

Patient goes to hospital website to Preregistration section and fills out web based FormFill. Data is then automatically entered to the hospital ADT system with prompts for Preadmission personnel to verify and edit as necessary. Preregistration is streamlined, time saved, errors reduced.

Automate the Printing of your Documents for Patient Admission

In the typical system, admission forms are printed at one site and distributed to many areas. FormFast eliminates the preprinted forms and embossed cards, saving significant dollars. Admission personnel enter patient information same as currently and print using "print" prompt same as currently. There will be no separate screens to access. Admission packets with patient data are automatically distributed to the admission laser printer, business office laser printer, medical record or nursing station laser printers at the same time. Admission personnel will not need to tear down a form and distribute copies. Based on patient type or financial class, software can also be programmed to select and print Consent forms, ABNs, Privacy forms, Medicare forms. Wrist bracelets and labels can be laser generated from a dedicated bin on the laser printer or a thermal printer with patient ID, bar codes and patient photo. Form and data can also be automatically faxed or e-mailed to admitting physician. For Same Day Surgery, ER or Nursing Floors, all clinical chart forms can be generated from admissions.

By eliminating the needs for embossers and impact printers and by simplifying training, bedside registration is enabled. The FormFast registration module is also a platform for collecting patient signatures electronically and for scanning insurance cards for central access. See the Patient Access Automation document for details.
